

ASA Multikat – trace elements for biogas plants

Product name: ASA Multikat

Description: Trace element solution to compensate nutrient deficiencies and to increase the biogas yield in the anaerobic process. Particularly in the case of methane formation, there is an essential requirement for certain metal ions, they are required as cofactors for formation of various enzyme systems.

ASA Multikat contains these metals in form of soluble salts. The trace elements are available in the form of the standard mixture, **ASA Multikat 30** as well as an individually compiled solution.

Dosage: per day 10 – 30 liter **ASA Multikat 30** (500 kW plant)

!! Important: shake canister prior to use !!

Place of addition: solid dosing screw, together with the substrate

Order-No.: 9120

Form of delivery: Solution of metal salts in water, bottled in 25 liter PE-canisters

Storage: Room temperature or colder, do not freeze
